1. Introduction

We have to manage several tutorials which are procure from vendors and then passes through life cycle of testing, localization of those tutorials in 10+ languages, and then integration to products applications. The purpose of the website is to manage the workflow of these tutorials from procurement to production deployment.

Benefits:

- Workflow based system to manage the 1000's of tutorials
- Live status update for each of the tutorials
- Prioritization of tutorials
- Tracking of testing and bugs regression status
- Tracking of localization of tutorials in 10 + languages by different vendors geo-located
- Deployment of tutorials to community platform
- Integration to product application (Desktop, Web and Mobile)

2. Expected List of Features

- Adding of tutorials directly by contractors
- Review of tutorials
- Prioritize tutorials as per market launch
- Marking applicability of tutorials for different devices
- Distribution of testing across devices and locales
- Mark tutorials ready for approval
- Deploy tutorials to productions
- Search tutorials based on name and authors
- Generate reports for current state and stale tutorials
- Send notifications and reminders to all stakeholders at regular intervals

3. Market Survey

- There are several community platforms exist but nothing that manages the workflow for testing and deployment at same time to production. Thus creating separate platform integrating with deployment community platform
